

Installation Guide for Antenna

⚠ [Safety Warning/Caution]

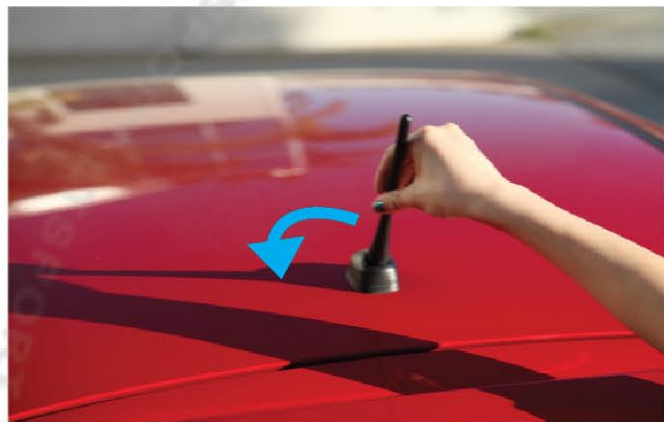

Preparation:

- Turn off the engine and switch off the radio before installation.
- Do not over-tighten the bolt and antenna.
- Clean the location for mounting the antenna with soft cloth and cleaning liquid and let dry.

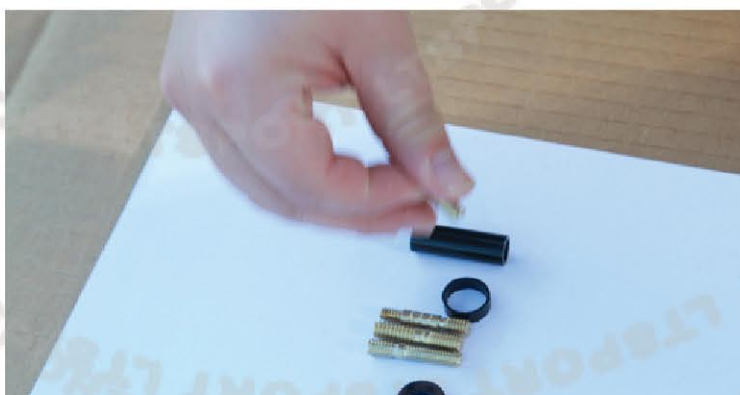

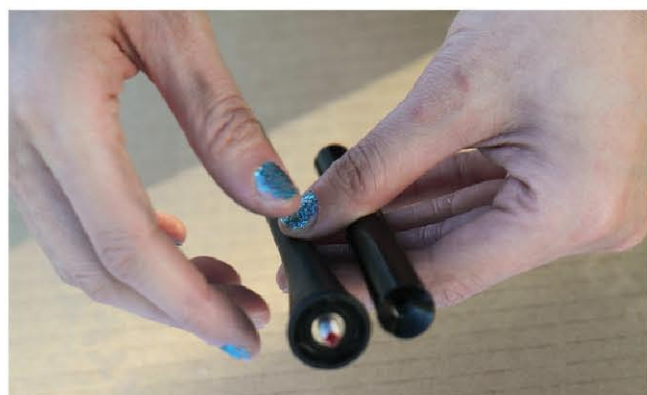

Step 1:

- Turn the old antenna counter-clockwise and pull it out from your vehicle.

Step 2:

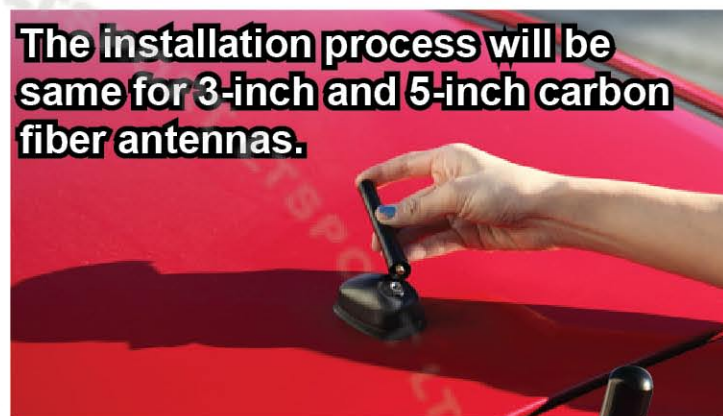

- Choose the correct size screw which will match the old screw and base.
- Install the screw in the antenna.

Choose one of the black rings supplied if there is a gap between the antenna and base.

Step 3:

- Insert the antenna into the threaded base of your vehicle and turn clockwise to tighten it in place.

The installation process will be same for 3-inch and 5-inch carbon fiber antennas.

FINAL

The washer and mounting screws on antenna may loosen from excessive vehicle vibration. Please always check the antenna assembly before transport.
